

“Things” in IoT

Dr. Manas Khatua

Associate Professor

Dept. of CSE, IIT Guwahati

E-mail: manaskhatua@iitg.ac.in

The “Things”

- **Sensors & Actuators** are the fundamental building blocks of IoT

- Sensor senses
- Actuator acts

Sensor

- **Smart objects** are any physical objects that contain

- Embedded technology
 - Microcontroller unit, memory storage, power supply, communication ports, input and output, timer or counter
- Sensors and/or actuators

Actuator

- Smart objects are to sense and/or interact with their environment in a meaningful way

- being interconnected, and
- enabling communication among themselves or with external agent.

Smart Object

- It **measures some physical quantity** and converts that measurement into analog/digital form
- There are a number of ways to group and cluster sensors into different categories
 - Based on **external energy requirement**
 - Active / Passive
 - Based on **placement location**
 - Invasive / Non-invasive
 - Based on **distance from the sensing object**
 - Contact / No-contact
 - Based on **sensing mechanism**
 - Thermoelectric / Electromechanical / Piezo resistive / Optic / Electric / Fluid mechanics / Photoelastic / etc.
 - Based on **sensing parameter**
 - Position / Occupancy / Motion / Velocity / Force / Pressure / Flow / Humidity / Light / Temperature / Acoustic / Radiation / Chemical / Biosensors / etc.
 - Based on **application industry**
 - Medical / Manufacturing / Agriculture / etc.
 - Based on **measuring scale**
 - Absolute / Relative

Sensor Types: What it measures

Sensor Type	Description	Example
Position	- Measures the position of an object - Position could be absolute/relative - Position sensor could be linear, angular, or multi-axis	- Proximity sensor - Potentiometer - Inclinometer
Occupancy	- Detects the presence of people and animals in a surveillance area - Generates signal even when a person is stationary	Radar Sensor
Motion	Detects the movement of people and objects	Passive Infrared (PIR) Sensor

Ultrasonic Proximity Sensor

Infrared Proximity Sensor

Microwave Radar Sensor

PIR Motion Sensor

Cont...

Sensor Type	Description	Example
Velocity and Acceleration	- Velocity sensor measures how fast an object moves - Acceleration sensor measures the changes in velocity	- Gyroscope - Accelerometer
Force	Detects whether a physical force is applied and the magnitude of the force	- Tactile sensor - Viscometer
Pressure	- Measuring the force applied by liquids or gases - It is measured as force per unit area	- Barometer - Piezometer

Gyroscope

Capacitive Touch Sensor

Barometric Pressure Sensor

Cont...

Sensor Type	Description	Example
Flow	• Detects the rate of fluid flow through a system in given period of time	• Water meter • Anemometer
Humidity	• Detects amount of water vapour in the air • Can be measured in absolute/relative scale	• Hygrometer • Soil moisture sensor
Light	• Detects the presence of light	• LDR light sensor • Photodetector • Flame Sensor

Water meter

Soil moisture sensor

LDR light sensor

Flame sensor

Cont...

Sensor Type	Description	Example
Radiation	• Detects the radiation in the environment	• Neutron detector • Geiger-Muller counter
Temperature	• Measures the amount of heat or cold present in the system • Two type: contact / non-contact	• Thermometer • Temperature gauge • Calorimeter

Neutron detector

Geiger-Muller counter

Temperature Sensor

Thermo-Hygrometer

Cont...

Sensor Type	Description	Example
Acoustic	Measures sound level	- Microphone - Hydrophone
Chemical	Measures the concentration of a chemical (e.g. CO₂) in a system	- Smoke detector - Breathalyzer
Biosensor	Detects various biological elements, such as organisms, tissues, cells, enzymes, antibodies, nucleic acid, etc.	- Pulse oximeter - Electrocardiograph (ECG) - Blood glucose biosensor

Hydrophone

Breathalyzer

Pulse oximeter

Actuators

- Sensors are designed to sense and measure the surrounding environment
- Actuators receive some type of control signal (commonly an electrical signal or digital command) that **triggers a physical effect**, usually some type of motion, force, and so on.

Actuator Classification

- Common ways to **classify actuators**:
 - ✓ **Type of motion** they produce
 - e.g. linear, rotary, one/two/three axes
 - ✓ **Power output**
 - e.g. high power, low power, micro power
 - ✓ **Binary / Continuous output**
 - Based on number of stable-state outputs
 - ✓ **Area of application**
 - Specific industry or vertical where they are used
 - ✓ **Type of energy**
 - e.g. mechanical energy, electrical energy, hydraulic energy, etc.

Actuators by Energy Type

Type	Examples
Mechanical actuators	Lever, Screw jack, Hand crank
Electrical actuators	Thyristor, Bipolar transistor, Diode
Electromechanical actuators	AC motor, DC motor, Steeper motor
Electromagnetic actuators	Electromagnet, Linear solenoid
Hydraulic and Pneumatic actuators	Hydraulic cylinder, Pneumatic cylinder, Piston, Pressure control valve, Air motor
Smart material actuator (includes thermal and magnetic actuators)	Magneto restrictive material, Bimetallic strip, Piezoelectric bimorph

Thyristor

Steeper Motor

Electromagnet

Hydraulic Cylinder

Bimetallic strip

Smart Objects

- It is the building blocks of IoT
- Smart object has the following **five characteristics**:
 - **Sensor(s) and/or Actuator(s)**
 - **Processing unit**
 - For acquiring sensed data from sensors,
 - processing and analysing sensing data,
 - coordinating control signals to any actuators, and
 - controlling many functions (e.g. communication unit, power unit).
 - **Memory**
 - Mostly on-chip flash memory
 - user memory used for storing application related data
 - program memory used for programming the device
 - **Communication unit**
 - Responsible for connecting a smart object with other smart objects and the outside world (via the network using wireless/wired communication)
 - **Power source**
 - To powered all components of the smart object

TelosB Mote

TI CC2650 Sensor Tag

Present Trends in Smart Objects

- Size is decreasing
- Power consumption is decreasing
- Processing power is increasing
- Communication capabilities are improving
- Communication is being increasingly standardized

Lessons Learned

- ✓ What is “Things” in IoT
- ✓ Classification method of Sensors
- ✓ Different Sensors based on Sensing parameter
- ✓ Classification method of Actuators
- ✓ Different Actuators based on Energy type
- ✓ What is “Smart object” in IoT

Thanks!
